

# FACT

Fabricated door chocks such as pieces of wood or metal bars **DO NOT WORK.**

Our **top priority** is the safety and security of your crew, vessel and cargo.

Most vessels use a fabricated metal bar or piece of wood to "chock" the door handles in their superstructure in the thought that this will secure the door against intrusion from unwanted aggressors. Tests reveal that this is not the case.

Experience and testing shows that a simple rattle of the handle from outside in most cases is enough for the fabricated chock to work free. Highlighted when the inventor of the **Easi-Chock** an ex UK Special Forces operative was tasked in 2010 with the unarmed guarding of a vessel which had simple pre-fabricated chocks already in place when they boarded the vessel.

Unfortunately, during the voyage the unarmed guards and crew were attacked by pirates and ultimately, boarded. By simply rattling the door handles causing the pre-fabricated chocks to fall away from the handle inside, the pirates were able to gain entry to the superstructure.

Luckily he lived to tell the tale and from his direct experience he sought to find a simple but effective resolution, one that would ensure that the superstructure door handles remained secure! After several years of testing and working with the help of major British shipbuilder, the **Easi-Chock** was developed.

Masters and security experts all recognise that time is important when stopping aggressors entering a vessel, sloppy devices which don't work provide no barrier, whilst the **Easi-Chock** provides a highly effective barrier which means the ingressor either cannot open the door or has to expend a great deal of time and energy to break down the door.

PATENT APPLIED FOR  
**EC Easi-Chock**  
The fast and simple door securing solution

EASI-CHOCK  
QUICK-SIMPLE  
SECURED IN  
SECONDS

A simple, quick to erect device that "chocks" the door handle securely with no handle rattle, but which can be taken down in seconds if there were an emergency is now a reality. This low cost security device is heralded as a major help in the fight against unwanted aggressors by many Masters and Ship Owners.

*"A brilliant idea and a cheap solution to a very difficult situation, the company really shows thinking outside the box!"*

**Poul Ekkendal - CSO of Maersk Tankers**

Many vessels are now equipped with the **Easi-Chock** device rather than being fitted with an unreliable wooden strut or a metal bar, why not join the many owners who have converted to the **Easi-Chock**, it is quick, simple and highly cost effective whilst also being a major tool in the fight against unwanted aggressors entering your vessel whilst at anchor or in the High Risk Areas of the World!
